These guidelines are meant solely to provide guidance to surveyors in the survey process.

General Requirements - Other
List in the REMARKS section any LSC Section 18.1 and 19.1 General Requirements that are not addressed by the provided K-tags, but are deficient. This information, along with the applicable Life Safety Code or NFPA standard citation, should be included.
Aspen State Regulation Set: K 10.00 Life Safety Code for Hospital

**Regulation Definition**

Building Rehabilitation

Repair, Renovation, Modification, or Reconstruction Any building undergoing repair, renovation, modification, or reconstruction complies with both of the following:

* Requirements of Chapter 18 and 19
* Requirements of the applicable Sections 43.3, 43.4, 43.5, and 43.6
18.1.1.4.3, 19.1.1.4.3, 43.1.2.1

Change of Use or Change of Occupancy

Any building undergoing change of use or change of occupancy classification complies with the requirements of Section 43.7, unless permitted by 18.1.1.4.2 or 19.1.1.4.2

18.1.1.4.2 (4.6.7 and 4.6.11), 19.1.1.4.2 (4.6.7 and 4.6.11), 43.1.2.2 (43.7) Additions Any building undergoing an addition shall comply with the requirements of Section 43.8. If the building has a common wall with a nonconforming building, the common wall is a fire barrier having at least a 2-hour fire resistance rating constructed of materials as required for the addition. Communicating openings occur only in corridors and are protected by approved self-closing fire doors with at least a 1-1/2-hour fire resistance rating. Additions comply with the requirements of Section 43.8.

18.1.1.4.1 (4.6.7 and 4.6.11), 18.1.1.4.1.1 (8.3), 18.1.1.4.1.2, 18.1.1.4.1.3, 19.1.1.4.1 (4.6.7 and 4.6.11), 19.1.1.4.1.1 (8.3), 19.1.1.4.1.2, 19.1.1.4.1.3, 43.1.2.3(43.8)
Sprinkler Requirements for Major Rehabilitation

If a nonsprinklered smoke compartment has undergone major rehabilitation the automatic sprinkler requirements of 18.3.5 have been applied to the smoke compartment. In cases where the building is not protected throughout by a sprinkler system, the requirements of 18.4.3.2, 18.4.3.3, and 18.4.3.8 are also met. Note: Major rehabilitation involves the modification of more than 50 percent, or more than 4500 square feet of the area of the smoke compartment.

18.1.1.4.3.3, 19.1.1.4.3.3

Multiple Occupancies

Sections of health care facilities classified as other occupancies meet all of the following:
* They are not intended to serve four or more inpatients.
* They are separated from areas of health care occupancies by

18.1.1.4.3.3, 19.1.1.4.3.3
Aspen State Regulation Set: K 10.00 Life Safety Code for Hospital

construction having a minimum 2-hour fire resistance rating in accordance with Chapter 8.
* The entire building is protected throughout by an approved, supervised automatic sprinkler system in accordance with Section 9.7.
Hospital outpatient surgical departments are required to be classified as an Ambulatory Health Care Occupancy regardless of the number of patients served.
18.1.3.3, 19.1.3.3, 42 CFR 482.41, 42 CFR 485.623

ST - K0132 - Multiple Occupancies - Contiguous Non-Health

Title Multiple Occupancies - Contiguous Non-Health
Type Standard

Regulation Definition
Multiple Occupancies - Contiguous Non-Health Care Occupancies
Non-health care occupancies that are located immediately next to a Health Care Occupancy, but are primarily intended to provide outpatient services are permitted to be classified as Business or Ambulatory Health Care Occupancies, provided the facilities are separated by construction having not less than 2-hour fire resistance-rated construction, and are not intended to provide services simultaneously for four or more inpatients. Outpatient surgical departments must be classified as Ambulatory Health Care Occupancy regardless of the number of patients served.
18.1.3.4.1, 19.1.3.4.1

Interpretive Guideline

RStrp.rpt
Multiple Occupancies - Construction Type

Where separated occupancies are in accordance with 18/19.1.3.2 or 18/19.1.3.4, the most stringent construction type is provided throughout the building, unless a 2-hour separation is provided in accordance with 8.2.1.3, in which case the construction type is determined as follows:

* The construction type and supporting construction of the health care occupancy is based on the story in which it is located in the building in accordance with 18/19.1.6 and Tables 18/19.1.6.1.

* The construction type of the areas of the building enclosing the other occupancies shall be based on the applicable occupancy chapters.

Building construction type and stories meets Table 19.1.6.1, 18.1.3.5, 19.1.3.5, 8.2.1.3.
Aspen State Regulation Set: K 10.00 Life Safety Code for Hospital

**NFPA 101**

#### Regulation Definition

Egress Doors

Doors in a required means of egress shall not be equipped with a latch or a lock that requires the use of a tool or key from the egress side unless using one of the following special locking arrangements:

**CLINICAL NEEDS OR SECURITY THREAT LOCKING**

Where special locking arrangements for the clinical security needs of the patient are used, only one locking device shall be permitted on each door and provisions shall be made for the rapid removal of occupants by: remote control of locks;
keying of all locks or keys carried by staff at all times; or other
such reliable means available to the staff at all times.
18.2.2.2.5.1, 18.2.2.2.6, 19.2.2.2.5.1, 19.2.2.2.6
SPECIAL NEEDS LOCKING ARRANGEMENTS Where
special locking arrangements for the safety needs of the
patient are used, all of the Clinical or Security Locking
requirements are being met. In addition, the locks must be
electrical locks that fail safety so as to release upon loss of
power to the device; the building is protected by a supervised
automatic sprinkler system and the locked space is protected
by a complete smoke detection system (or is constantly
monitored at an attended location within the locked space);
and both the sprinkler and detection systems are arranged to
unlock the doors upon activation. 18.2.2.2.5.2, 19.2.2.2.5.2,
TIA 12-4
DELAYED-EGRESS LOCKING ARRANGEMENTS
Approved, listed delayed-egress locking systems installed in
accordance with 7.2.1.6.1 shall be permitted on door
assemblies serving low and ordinary hazard contents in
buildings protected throughout by an approved, supervised
automatic fire detection system or an approved, supervised
automatic sprinkler system. 18.2.2.2.4, 19.2.2.2.4 ACCESS-
CONTROLLED EGRESS LOCKING ARRANGEMENTS
Access-Controlled Egress Door assemblies installed in
accordance with 7.2.1.6.2 shall be permitted. 18.2.2.2.4,
19.2.2.2.4
ELEVATOR LOBBY EXIT ACCESS LOCKING
ARRANGEMENTS Elevator lobby exit access door
locking in accordance with 7.2.1.6.3 shall be permitted on door
assemblies in buildings protected throughout by an approved,
supervised automatic fire detection system and an approved,
supervised automatic sprinkler system. 18.2.2.2.4, 19.2.2.2.4
### ST - K0223 - Doors with Self-Closing Devices

**Title**  Doors with Self-Closing Devices  
**Type**  Standard  

**Regulation Definition**  
Doors with Self-Closing Devices
Doors in an exit passageway, stairway enclosure, or horizontal exit, smoke barrier, or hazardous area enclosure are self-closing and kept in the closed position, unless held open by a release device complying with 7.2.1.8.2 that automatically closes all such doors throughout the smoke compartment or entire facility upon activation of:

* Required manual fire alarm system; and  
* Local smoke detectors designed to detect smoke passing through the opening or a required smoke detection system; and  
* Automatic sprinkler system, if installed; and  
* Loss of power. 18.2.2.2.7, 18.2.2.2.8, 19.2.2.2.7, 19.2.2.2.8

**Interpretive Guideline**

### ST - K0224 - Horizontal Sliding Doors

**Title**  Horizontal Sliding Doors  
**Type**  Standard  

**Regulation Definition**  
Horizontal-Sliding Doors
Horizontal-sliding doors permitted by 7.2.1.14 that are not automatic-closing are limited to a single leaf and shall have a latch or other mechanism to ensure the door will not rebound. Horizontal-sliding doors serving an occupant load fewer than
10 shall be permitted, providing all of the following criteria are met:

* Area served by the door has no hazards.
* Door is operable from either side without special knowledge or effort.
* Force required to operate the door in the direction of travel is less than or equal to 30 lbf to set the door in motion and less than or equal to 15 lbf to close or open to the required width.
* Assembly is appropriately fire rated, and where rated, is self-or automatic-closing by smoke detection per 7.2.1.8, and installed per NFPA 80.
* Where required to latch, the door has a latch or other mechanism to ensure the door will not rebound. 18.2.2.2.10, 19.2.2.2.10

**ST - K0225 - Stairways and Smokeproof Enclosures**

Regulation Definition

Sleeping Suites

Occupants shall have exit access to a corridor or direct access to a horizontal exit. Where greater than or equal to 2 exits are required, one exit access door may be to a stairway, passageway or to the exterior. Suites shall be provided with constant staff supervision. Staff shall have direct visual supervision of patient sleeping rooms, from a constantly attended location or the room shall be provided with an automatic smoke detection system. Suites more than 1,000 square feet shall have 2 or more remote exits. One means of egress from the suite shall be to a corridor and one may be into an adjacent suite separated in accordance with corridor requirements. Suites shall not exceed the following size limitations:

* 5,000 square feet if the suite is not fully smoke detected or fully sprinklered
* 7,500 square feet if the suite is either fully smoke detected or fully sprinklered
* 10,000 square feet if the suite is both fully smoke detected and fully sprinklered and the sleeping rooms have direct supervision from a constantly attended location

Travel distance between any point in a suite to exit access shall not exceed 100 feet and distance to an exit shall not exceed 150 feet (200 feet if building is fully sprinklered).

**ST - K0311 - Vertical Openings - Enclosure**

**Title** Vertical Openings - Enclosure  
**Type** Standard  

**NFPA 101**

**Regulation Definition**

Vertical Openings - Enclosure

**2015 EXISTING**

Stairways, elevator shafts, light and ventilation shafts, chutes, and other vertical openings between floors are enclosed with construction having a fire resistance rating of at least 1 hour. An atrium may be used in accordance with 8.6. 19.3.1.1 through 19.3.1.6 If all vertical openings are properly enclosed with construction providing at least a 2-hour fire resistance rating please note.

**2015 NEW**

Stairways, elevator shafts, light and ventilation shafts, chutes, and other vertical openings between floors are enclosed with construction having a fire resistance rating of at least 2 hours connecting four or more stories. (1 hour for single story building and buildings up to three stories in height.) An atrium may be used in accordance with 8.6.7.

ST - K0321 - Hazardous Areas - Enclosure

**Title**  Hazardous Areas - Enclosure

**Type**  Standard

**Regulation Definition**

Hazardous Areas - Enclosure

2015 EXISTING

Hazardous areas are protected by a fire barrier having 1-hour fire resistance rating (with 3/4-hour fire rated doors) or an automatic fire extinguishing system in accordance with 8.7.1. When the approved automatic fire extinguishing system option is used, the areas shall be separated from other spaces by smoke resisting partitions and doors in accordance with 8.4. Doors shall be self-closing or automatic-closing and permitted to have nonrated or field-applied protective plates that do not exceed 48 inches from the bottom of the door. Describe the floor and zone locations of hazardous areas that are deficient in REMARKS.

19.3.2.1

2015 NEW

Hazardous areas are protected in accordance with 18.3.2.1. The areas shall be enclosed with a 1-hour fire-rated barrier, with a 3/4-hour fire-rated door without windows (in accordance with 8.7.1.1). Doors shall be self-closing or automatic-closing in accordance with 7.2.1.8. Hazardous areas are protected by a sprinkler system in accordance with 9.7, 18.3.2.1, and 8.4.

Describe the floor and zone locations of hazardous areas that
Aspen State Regulation Set: K 10.00 Life Safety Code for Hospital

are deficient in REMARKS.

ST - K0323 - Anesthetizing Locations

Title: Anesthetizing Locations  
Type: Standard  

NFPA 101

**Regulation Definition**

Anesthetizing Locations

Areas designated for administration of general anesthesia (i.e., inhalation anesthetics) are in accordance with 8.7 and NFPA 99. Zone valves are: located immediately outside each anesthetizing location for medical gas or vacuum; readily accessible in an emergency; and arranged so shutting off any one anesthetizing location will not affect others. Area alarm panels are provided to monitor all medical gas, medical-surgical vacuum, and piped WAGD systems. Panels are at locations that provide for surveillance, indicate medical gas pressure decreases of 20% and vacuum decreases of 12 in. gauge HgV, and provide visual and audible indication. Alarm sensors are installed either on the source side of individual room zone valve box assemblies or on the patient/use side of each of the individual zone box valve assemblies. The EES critical branch supplies power for task illumination, fixed equipment, select receptacles, and select power circuits, and EES equipment system supplies power to ventilation system. Heating, cooling, and ventilation are in accordance with ASHRAE 170. Medical supply and equipment manufacturer's instructions for use are considered before reducing humidity levels to those allowed by ASHRAE, per S&C 13-58.

**Interpretive Guideline**

...
Cooking Facilities

Cooking equipment is protected in accordance with NFPA 96, Standard for Ventilation Control and Fire Protection of Commercial Cooking Operations, unless:

* residential cooking equipment (i.e., small appliances such as microwaves, hot plates, toasters) are used for food warming or limited cooking in accordance with 18.3.2.5.2, 19.3.2.5.2

* cooking facilities open to the corridor in smoke compartments with 30 or fewer patients comply with the conditions under 18.3.2.5.3, 19.3.2.5.3, or

* cooking facilities in smoke compartments with 30 or fewer patients comply with conditions under 18.3.2.5.4, 19.3.2.5.4.

Cooking facilities protected according to NFPA 96 per 9.2.3 are not required to be enclosed as hazardous areas, but shall not be open to the corridor.

18.3.2.5.1 through 18.3.2.5.4, 19.3.2.5.1 through 19.3.2.5.5, 9.2.3, TIA 12-2

Alcohol Based Hand Rub Dispenser (ABHR)

Alcohol Based Hand Rub Dispenser (ABHR)

NFPA 101
Alcohol Based Hand Rub Dispenser (ABHR)

ABHRs are protected in accordance with 8.7.3.1, unless all conditions are met:
* Corridor is at least 6 feet wide
* Maximum individual dispenser capacity is 0.32 gallons (0.53 gallons in suites) of fluid and 18 ounces of Level 1 aerosols
* Dispensers shall have a minimum of 4-foot horizontal spacing
* Not more than an aggregate of 10 gallons of fluid or 135 ounces aerosol are used in a single smoke compartment outside a storage cabinet, excluding one individual dispenser per room
* Storage in a single smoke compartment greater than 5 gallons complies with NFPA 30
* Dispensers are not installed within 1 inch of an ignition source
* Dispensers over carpeted floors are in sprinklered smoke compartments
* ABHR does not exceed 95 percent alcohol
* Operation of the dispenser shall comply with Section 18.3.2.6(11) or 19.3.2.6(11)
* ABHR is protected against inappropriate access

18.3.2.6, 19.3.2.6, 42 CFR Parts 403, 418, 460, 482, 483, and 485
Interior Wall and Ceiling Finish

2015 EXISTING
Interior wall and ceiling finishes, including exposed interior surfaces of buildings such as fixed or movable walls, partitions, columns, and have a flame spread rating of Class A or Class B. The reduction in class of interior finish for a sprinkler system as prescribed in 10.2.8.1 is permitted.
10.2, 19.3.3.1, 19.3.3.2

2015 NEW
Interior wall and ceiling finishes, including exposed interior surfaces of buildings such as fixed or movable walls, partitions, columns, have a flame spread rating of Class A. The reduction in class of interior finish for a sprinkler system as prescribed in 10.2.8.1 is permitted.
Individual rooms not exceeding four persons may have a Class A or B finish.
Lower half of corridor walls, not exceeding 4 feet in height, may have a Class A or B flame spread rating.
10.2, 18.3.3.1, 18.3.3.2

Indicate flame spread rating(s). ____________________

Title  Interior Floor Finish
Type   Standard

Interior Floor Finish
2015 NEW
Interior finishes shall comply with 10.2. Floor finishes in exit enclosures and exit access corridors and spaces not separated by walls that resist the passage of smoke shall be Class I or II.

ST - K0341 - Fire Alarm System - Installation

Title  Fire Alarm System - Installation
Type   Standard

NFPA 101

**Regulation Definition**

A fire alarm system is installed with systems and components approved for the purpose in accordance with NFPA 70, National Electric Code, and NFPA 72, National Fire Alarm Code to provide effective warning of fire in any part of the building. In areas not continuously occupied, detection is installed at each fire alarm control unit. In new occupancy, detection is also installed at notification appliance circuit power extenders, and supervising station transmitting equipment. Fire alarm system wiring or other transmission paths are monitored for integrity.

**Interpretive Guideline**

18.3.4.1, 19.3.4.1, 9.6, 9.6.1.8
Aspen State Regulation Set: K 10.00 Life Safety Code for Hospital

ST - K0342 - Fire Alarm System - Initiation

Title  Fire Alarm System - Initiation
Type   Standard

NFPA 101

Regulation Definition

Fire Alarm System - Initiation

Initiation of the fire alarm system is by manual means and by any required sprinkler system alarm, detection device, or detection system. Manual alarm boxes are provided in the path of egress near each required exit. Manual alarm boxes in patient sleeping areas shall not be required at exits if manual alarm boxes are located at all nurse's stations or other continuously attended staff location, provided alarm boxes are visible, continuously accessible, and 200' travel distance is not exceeded.

### ST - K0362 - Corridors - Construction of Walls

**Title**  
Corridors - Construction of Walls

**Type**  
Standard

**Regulation Definition**

Corridors - Construction of Walls

2015 EXISTING

Corridors are separated from use areas by walls constructed with at least 1/2-hour fire resistance rating. In fully sprinklered smoke compartments, partitions are only required to resist the transfer of smoke. In nonsprinklered buildings, walls extend to the underside of the floor or roof deck above the ceiling. Corridor walls may terminate at the underside of ceilings where specifically permitted by Code. Fixed fire window assemblies in corridor walls are in accordance with Section 8.3, but in sprinklered compartments there are no restrictions in area or fire resistance of glass or frames. If the walls have a fire resistance rating, give the rating __________ if the walls terminate at the underside of the ceiling, give brief description in REMARKS, describing the ceiling throughout the floor area.

19.3.6.2, 19.3.6.2.7

2015 NEW

Corridor walls shall form a barrier to limit the transfer of smoke. Such walls shall be permitted to terminate at the
Aspen State Regulation Set: K 10.00 Life Safety Code for Hospital

ceiling where the ceiling is constructed to limit the transfer of smoke. No fire resistance rating is required for the corridor walls.

ST - K0712 - Fire Drills

Title Fire Drills
Type Standard

**Regulation Definition**

Fire Drills

**Interpretive Guideline**

---
Aspen State Regulation Set: K 10.00 Life Safety Code for Hospital

Fire drills include the transmission of a fire alarm signal and simulation of emergency fire conditions. Fire drills are held at unexpected times under varying conditions, at least quarterly on each shift. The staff is familiar with procedures and is aware that drills are part of established routine. Responsibility for planning and conducting drills is assigned only to competent persons who are qualified to exercise leadership. Where drills are conducted between 9:00 PM and 6:00 AM, a coded announcement may be used instead of audible alarms.

18.7.1, 19.7.1, 4.7

ST - K0741 - Smoking Regulations

</tbody>
</table>

Smoking regulations shall be adopted and shall include not less than the following provisions:

1. Smoking shall be prohibited in any room, ward, or compartment where flammable liquids, combustible gases, or oxygen is used or stored and in any other hazardous location, and such area shall be posted with signs that read NO SMOKING or shall be posted with the international symbol for no smoking.

2. In health care occupancies where smoking is prohibited and signs are prominently placed at all major entrances, secondary signs with language that prohibits smoking shall not be required.

3. Smoking by patients classified as not responsible shall be
prohibited.  
(4) The requirement of 18.7.4(3) shall not apply where the patient is under direct supervision. 
(5) Ashtrays of noncombustible material and safe design shall be provided in all areas where smoking is permitted. 
(6) Metal containers with self-closing cover devices into which ashtrays can be emptied shall be readily available to all areas where smoking is permitted. 
18.7.4, 19.7.4

(Note smoking tower disposal receptacles are not ashtrays)

ST - K0751 - Draperies, Curtains, and Loosely Hanging Fabr

Title Draperies, Curtains, and Loosely Hanging Fabr
Type Standard

**Regulation Definition**

Draperies, curtains including cubicle curtains and loosely hanging fabric or films shall be in accordance with 10.3.1. Excluding curtains and draperies: at showers and baths; on windows in patient sleeping room located in sprinklered compartments; and in non-patient sleeping rooms in sprinklered compartments where individual drapery or curtain panels do not exceed 48 square feet or total area does not exceed 20 percent of the wall.

**Regulation Definition**

Combustible Decorations

**Interpretive Guideline**
Combustible decorations shall be prohibited unless one of the following is met:
* Flame retardant or treated with approved fire-retardant coating that is listed and labeled for product.
* Decorations meet NFPA 701.
* Decorations exhibit heat release less than 100 kilowatts in accordance with NFPA 289.
* Decorations, such as photographs, paintings and other art are attached to the walls, ceilings and non-fire-rated doors in accordance with 18.7.5.6 or 19.7.5.6.
* The decorations in existing occupancies are in such limited quantities that a hazard of fire is not present.

18.7.5.6, 19.7.5.6

Soiled Linen and Trash Containers

**Title**  Soiled Linen and Trash Containers
**Type**  Standard

**Regulation Definition**
Soiled Linen and Trash Containers

Soiled linen or trash collection receptacles shall not exceed 32 gallons in capacity. The average density of container capacity in a room or space shall not exceed 0.5 gallons/square feet. A total container capacity of 32 gallons shall not be exceeded within any 64 square feet area. Mobile soiled linen or trash collection receptacles with capacities greater than 32 gallons shall be located in a room protected as a hazardous area when not attended. Containers used solely for recycling are permitted to be excluded from the above requirements where each container is less than or equal to 96 gallons unless attended, and containers for combustibles are labeled and
### ST - K0761 - Maintenance Inspection & Testing Doors

**Title**  Maintenance Inspection & Testing Doors  
**Type**  Standard  

1.  Fire doors assemblies are inspected and tested annually in accordance with NFPA 80, Standard for Fire Doors and Other Opening Protectives.  
2.  Non-rated doors, including corridor doors to patient rooms and smoke barrier doors, are routinely inspected as part of the facility maintenance program.  
3.  Individuals performing the door inspections and testing possess knowledge, training or experience that demonstrates ability.  
4.  Written records of inspection and testing are maintained and are available for review.

**Title**  Electrical Systems - Essential Electric System

**Type**  Standard

**NFPA 99**

**Regulation Definition**

Electrical Systems - Essential Electric System Maintenance and Testing

The generator or other alternate power source and associated equipment is capable of supplying service within 10 seconds. If the 10-second criterion is not met during the monthly test, a process shall be provided to annually confirm this capability for the life safety and critical branches. Maintenance and testing of the generator and transfer switches are performed in accordance with NFPA 110. Generator sets are inspected weekly, exercised under load 30 minutes 12 times a year in 20-40 day intervals, and exercised once every 36 months for 4 continuous hours. Scheduled test under load conditions include a complete simulated cold start and automatic or manual transfer of all EES loads, and are conducted by competent personnel. Maintenance and testing of stored energy power sources (Type 3 EES) are in accordance with NFPA 111. Main and feeder circuit breakers are inspected annually, and a program for periodically exercising the components is established according to manufacturer requirements. Written records of maintenance and testing are

**Interpretive Guideline**
Aspen State Regulation Set: K 10.00 Life Safety Code for Hospital

maintained and readily available. EES electrical panels and circuits are marked and readily identifiable. Minimizing the possibility of damage of the emergency power source is a design consideration for new installations.

ST - K0920 - Electrical Equipment - Power Cords and Extens

Title Electrical Equipment - Power Cords and Extens
Type Standard

NFPA 99

Regulation Definition

Interpretive Guideline

Electrical Equipment - Power Cords and Extension Cords
Power strips in a patient care vicinity are only used for components of movable patient-care-related electrical equipment (PCREE) assembles that have been assembled by qualified personnel and meet the conditions of 10.2.3.6. Power strips in the patient care vicinity may not be used for non-PCREE (e.g., personal electronics), except in long-term care resident rooms that do not use PCREE. Power strips for PCREE meet UL 1363A or UL 60601-1. Power strips for non-PCREE in the patient care rooms (outside of vicinity) meet UL 1363. In non-patient care rooms, power strips meet other UL standards. All power strips are used with general precautions. Extension cords are not used as a substitute for fixed wiring of a structure. Extension cords used temporarily are removed immediately upon completion of the purpose for which it was installed and meets the conditions of 10.2.4. 10.2.3.6 (NFPA 99), 10.2.4 (NFPA 99), 400-8 (NFPA 70), 590.3(D) (NFPA 70)

**Regulation Definition**

Electrical Equipment - Testing and Maintenance Requirements

The physical integrity, resistance, leakage current, and touch current tests for fixed and portable patient-care related electrical equipment (PCREE) is performed as required in 10.3. Testing intervals are established with policies and protocols. All PCREE used in patient care rooms is tested in accordance with 10.3.5.4 or 10.3.6 before being put into service and after any repair or modification. Any system
Aspen State Regulation Set: K 10.00 Life Safety Code for Hospital

consisting of several electrical appliances demonstrates compliance with NFPA 99 as a complete system. Service manuals, instructions, and procedures provided by the manufacturer include information as required by 10.5.3.1.1 and are considered in the development of a program for electrical equipment maintenance. Electrical equipment instructions and maintenance manuals are readily available, and safety labels and condensed operating instructions on the appliance are legible. A record of electrical equipment tests, repairs, and modifications is maintained for a period of time to demonstrate compliance in accordance with the facility's policy. Personnel responsible for the testing, maintenance and use of electrical appliances receive continuous training.

ST - K0923 - Gas Equipment - Cylinder and Container Storag

Title  Gas Equipment - Cylinder and Container Storag
Type   Standard

**Regulation Definition**

Gas Equipment - Cylinder and Container Storage

Greater than or equal to 3,000 cubic feet Storage locations are designed, constructed, and ventilated in accordance with 5.1.3.3.2 and 5.1.3.3.3.

>300 but <3,000 cubic feet Storage locations are outdoors in an enclosure or within an enclosed interior space of non- or limited-combustible construction, with door (or gates outdoors) that can be secured. Oxidizing gases are not stored with flammables, and are separated from combustibles by 20 feet (5 feet if sprinklered) or enclosed in a cabinet of noncombustible construction having a minimum 1/2 hr. fire protection rating.

Less than or equal to 300 cubic feet In a single smoke compartment, individual cylinders available for immediate use in patient care areas with an aggregate volume of less than or equal to 300 cubic feet are not required to be stored in an enclosure. Cylinders must be handled with precautions as specified in 11.6.2.

A precautionary sign readable from 5 feet is on each door or gate of a cylinder storage room, where the sign includes the wording as a minimum "CAUTION: OXIDIZING GAS(ES) STORED WITHIN NO SMOKING." Storage is planned so cylinders are used in order of which they are received from the supplier. Empty cylinders are segregated from full cylinders. When facility employs cylinders with integral pressure gauge, a threshold pressure considered empty is established. Empty
cylinders are marked to avoid confusion. Cylinders stored in
the open are protected from weather.

Title Gas Equipment - Qualifications and Training

Type Standard

NFPA 99

Regulation Definition

Gas Equipment - Qualifications and Training of Personnel

Personnel concerned with the application, maintenance and handling of medical gases and cylinders are trained on the risk. Facilities provide continuing education, including safety guidelines and usage requirements. Equipment is serviced only by personnel trained in the maintenance and operation of equipment.

11.5.2.1 (NFPA 99)
Gas Equipment - Transfilling Cylinders

Title  Gas Equipment - Transfilling Cylinders
Type   Standard
NFPA 99

Regulation Definition

Transfilling of oxygen from one cylinder to another is in accordance with CGA P-2.5, Transfilling of High Pressure Gaseous Oxygen Used for Respiration. Transfilling of any gas from one cylinder to another is prohibited in patient care rooms. Transfilling to liquid oxygen containers or to portable containers over 50 psi comply with conditions under 11.5.2.3.1 (NFPA 99). Transfilling to liquid oxygen containers or to portable containers under 50 psi comply with conditions under 11.5.2.3.2 (NFPA 99).

11.5.2.2 (NFPA 99)

Gas Equipment - Labeling Equipment and Cylinders

Title  Gas Equipment - Labeling Equipment and Cylinders
Type   Standard
NFPA 99

Regulation Definition

Equipment listed for use in oxygen-enriched atmospheres are so labeled. Oxygen metering equipment and pressure reducing
regulators are labeled “OXYGEN-USE NO OIL.” Flowmeters, pressure reducing regulators, and oxygen-dispensing apparatus are clearly and permanently labeled designating the gases for which they are intended. Oxygen-metering equipment, pressure reducing regulators, humidifiers, and nebulizers are labeled with name of manufacturer or supplier. Cylinders and containers are labeled in accordance with CGA C-7. Color coding is not utilized as the primary method of determining cylinder or container contents. All labeling is durable and withstands cleaning or disinfecting.

11.5.3.1 (NFPA 99)

Features of Fire Protection - Fire Loss Prevention in Operating Rooms

Periodic evaluations are made of hazards that could be encountered during surgical procedures, and fire prevention procedures are established. When flammable germicides or antiseptics are employed during surgeries utilizing electrosurgery, cautery or lasers:
Aspen State Regulation Set: K 10.00 Life Safety Code for Hospital

* packaging is non-flammable
* applicators are in unit doses
* Preoperative "time-out" is conducted prior to the initiation of any surgical procedure to verify:
  o application site is dry prior to draping and use of surgical equipment
  o pooling of solution has not occurred or has been corrected
  o solution-soaked materials have been removed from the OR prior to draping and use of surgical devices
  o policies and procedures are established outlining safety precautions related to the use of flammable germicide or antiseptic use

Procedures are established for operating room emergencies including alarm activation, evacuation, equipment shutdown, and control operations. Emergency procedures include the control of chemical spills, and extinguishment of drapery, clothing and equipment fires. Training is provided to new OR personnel (including surgeons), continuing education is provided, incidents are reviewed monthly, and procedures are reviewed annually.

ST - K1053 - Emergency Management Plan

Title Emergency Management Plan
Type Rule

FAC 59A-3.078

Regulation Definition

A written, comprehensive emergency management plan for emergency care during an internal or external disaster or emergency, which is reviewed and updated annually, shall be maintained. The hospital shall test the implementation of the emergency management plan semiannually, either in response to a disaster or an emergency or in a planned drill, and shall evaluate and document the hospital's performance to the hospital's safety committee.

ST - K1054 - Safety Committee

Title Safety Committee
Type Rule

FAC 59A-277 (1)-(2)
Aspen State Regulation Set: K 10.00 Life Safety Code for Hospital

Regulation Definition

Each hospital shall have a hospital safety committee to adopt, implement and monitor a comprehensive, hospital wide safety program. The committee's functions and responsibilities may be assumed by another hospital committee. The committee shall adopt written policies and procedures to enhance the safety of the hospital, its personnel and patients. Such policies shall include but not be limited to the following:

(a) A method of coordination of the safety policies of the various hospital units, departments and committees;
(b) An incident reporting system;
(c) A method of conveying safety-related information to all hospital employees; and
(d) Conduct of a hazardous surveillance program at specifically defined intervals.

(2) In addition to other requirements, each hospital shall provide a complete system for patient identification within the hospital, including a system for all emergency room cases, including DOA, and disasters.

Florida Administrative Code 59A-3.277(1)-(2).

ST - K1055 - Mobile Testing & Treatment Facilities

Title Mobile Testing & Treatment Facilities
Type Rule

FAC 59A-3.081 FBC (2017) 6th Ed. 449

Regulation Definition
Mobile Testing & Treatment Facilities

(1) In addition to any other state of Florida required permits, mobile facilities shall be approved in advance by the Agency.
for Health Care Administration before they may be utilized for patient services.

(2) The mobile facility shall comply with the applicable requirements of the Florida Building Code, Building, The Guidelines, Part 3 Outpatient Facilities, Chapter 3.13 Specific Requirements for Mobile, Transportable, and Relocatable Units, and with Section 449 of this code for the type of service to be provided.

(3) Mobile or transportable units that are limited to providing noninvasive, diagnostic and treatment services without the use of anesthetics shall not be required to comply with other sections of The Guidelines as described in The Guidelines, Part 3 Outpatient Facilities, Chapters 3.13 - 8.2.1.2.

(4) Electrical connection to the hospital electrical system shall be permitted only when the mobile facility complies with appropriate requirements of the Florida Building Code, Building.

(5) When units provide critical care procedures, there shall be a "code blue" code call station in the unit connected to an attended location to summon assistance from the hospital emergency resuscitation response team.

ST - K1056 - Infection Control Risk Assessment

Title: Infection Control Risk Assessment

Type: Rule

FBC (2017) 6th Ed. 449
Aspen State Regulation Set: K 10.00 Life Safety Code for Hospital

**Regulation Definition**

For a health care facility project to support safe designs, finishes, surfaces, and HVAC/plumbing systems, an infection control risk assessment shall be a part of integrated facility planning, design, construction, and commissioning activities. An ICRA shall be conducted during the early planning phase of a project, before construction begins, and continue through project construction and commissioning. At minimum, an ICRA shall be conducted by a team with expertise in infection prevention and control, direct patient care (clinical use of relevant areas), facility design, construction, and HVAC and plumbing systems when these systems are involved. The scope and nature of the project shall dictate others to be involved.

**ST - K1090 - Hospital EMS Communications**

**Title** Hospital EMS Communications

**Type** Rule

FS 395.1031

**Regulation Definition**

Each licensed hospital with an emergency department must be capable of communicating by two-way radio with all ground-based basic life support service vehicles and advanced life support service vehicles that operate within the hospital's service area under a state permit and with all rotorcraft air ambulances that operate under a state permit. The hospital's radio system must be capable of interfacing with municipal mutual aid channels designated by the Department of Management Services and the Federal Communications

**Regulation Definition**

This chapter shall apply to new and existing health care facilities. A health care facility shall have a security management plan. The scope, objectives, performance, and effectiveness of the security plan shall be tested at a frequency shown to be necessary by review of the security vulnerability assessment (SVA) in accordance with Section 13.3.
