ST - Y0000 - INITIAL COMMENTS

Title INITIAL COMMENTS
Type Memo Tag

Regulation Definition

Interpretive Guideline

These guidelines are meant solely to provide guidance to surveyors in the survey process.

ST - Y1001 - Awareness of the Egress System

Title Awareness of the Egress System
Type Rule

NFPA 101

Regulation Definition

Interpretive Guideline

Every exit shall be clearly visible, or the route to reach every exit shall be conspicuously indicated. Each means of egress, in its entirety, shall be arranged or marked so that the way to a place of safety is indicated in a clear manner. NFPA 101 (2015) 4.5.3.3.

ST - Y1002 - Existing Life Safety Features

Title Existing Life Safety Features
Type Standard

NFPA 101
### Regulation Definition

No existing life safety feature shall be removed or reduced where such feature is a requirement for new construction. Existing life safety features obvious to the public, if not required by the Code, shall be either maintained or removed. NFPA 101 (2015) 4.6.12.2 & 4.6.12.3.

Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

**Regulation Definition**

Maintenance, inspection, and testing shall be under the supervision of a responsible person who shall ensure that testing, inspecting, and maintenance are made at specified intervals in accordance with applicable NFPA standards or as directed by the authority having jurisdiction. NFPA 101 (2015) 4.6.12.5

**Interpretive Guideline**

The Code also addresses other considerations that, while important in fire conditions, provide an ongoing benefit in
other conditions of use, including non-fire emergencies.

ST - Y1007 - Interim Life Safety Measures

Title  Interim Life Safety Measures

Type  Standard

NFPA 101

Regulation Definition  Interpretive Guideline

Buildings, or portions of buildings, shall be permitted to be occupied during construction, repair, alterations, or additions only where required means of egress and required fire protection features are in place and continuously maintained for the portion occupied or where alternative life safety measures acceptable to the authority having jurisdiction are in place. NFPA 101 (2015) 4.6.10.

ST - Y1008 - Firestop Systems & Devices

Title  Firestop Systems & Devices

Type  Standard

NFPA 101

Regulation Definition  Interpretive Guideline

Penetrations for cables, cable trays, conduits, pipes, tubes, combustion vents and exhaust vents, wires, and similar items to accommodate electrical, mechanical, plumbing, and communications systems that pass through a wall, floor, or floor/ceiling assembly constructed as a fire barrier shall be protected by a firestop system or device. The firestop system or device shall be tested in accordance with ASTM E 814, Standard Test Method for Fire Tests of Through Penetration.
Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

Fire Stops, or ANSI/UL 1479, Standard for Fire Tests of Through-Penetration Firestops, at a minimum positive pressure differential of 0.01 in. water column (2.5 N/m²) between the exposed and the unexposed surface of the test assembly. NFPA 101 (2015) 8.3.5.1.

ST - Y1009 - Joint Penetrations

Title Joint Penetrations
Type Standard

**Regulation Definition**

Joints made within or between fire resistance-rated assemblies shall be protected with a joint system that is designed and tested to prevent the spread of fire for a time period equal to that of the assembly in which the joint is located. Such materials, systems, or devices shall be tested as part of the assembly in accordance with the requirements of ASTM E 1966, Standard Test Method for Fire-Resistive Joint Systems, or ANSI/UL 2079, Standard for Tests for Fire Resistance of Building Joint Systems. NFPA 101 (2015) 8.3.6.5.

ST - Y1010 - Other Automatic Extinguishing Equipment

Title Other Automatic Extinguishing Equipment
Type Standard

**Regulation Definition**

In any occupancy where the character of the fuel for fire is such that extinguishment or control of fire is accomplished by a type of automatic extinguishing system in lieu of an
Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

automatic sprinkler system, such system shall be installed in accordance with the appropriate standard, as determined in accordance with Table 9.7.3.1.
NFPA 101 (2015) 9.7.3.1

**Regulation Definition**

No health care facility construction work, including demolition, shall be started until prior written approval has been given by the Office of Plans and Construction. This includes all construction of new facilities and any and all additions, modifications, or renovations to existing facilities. When construction is required, either for new buildings or additions, alterations or renovations to existing buildings, the plans and specifications shall be prepared and submitted to the Office of Plans and Construction for approval by a Florida-registered architect and a Florida-registered professional engineer.

(1) All construction of new facilities or conversions and all additions, modifications, alterations, renovations, and refurbishing to the site, facility, equipment or systems of a facility must be in compliance with all applicable codes and standards. In addition to the standards in this rule, the following codes apply to design and construction of ICF/DD facilities:

(a) The Florida Building Code as adopted pursuant to Rule 61G20-1.001, F.A.C., by the Florida Building Code Commission at the Department of Business and Professional Regulation Definition | Interpretive Guideline
Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

Regulation.
(b) The fire codes adopted by the State Fire Marshal pursuant to Rule Chapter 69A-38, F.A.C., by the Division of State Fire Marshal at the Department of Financial Services.
(c) For the purpose of determining life safety occupancy classification, facilities providing services to clients that receive chronic, skilled/acute nursing or medical care or designated as a Level of Care 9 will be classified as a health care occupancy.
(d) For the purpose of determining life safety occupancy classification, facilities providing personal care services will be classified as a residential board and care occupancy.
(2) The Fire Safety Evaluation System (FSES) NFPA-101 adopted pursuant to Rule Chapter 69A-38, F.A.C., as required by the Division of State Fire Marshall at the Department of Financial Services, shall not be used to meet the required codes and standards for new construction, renovations, or for conversion of an existing building to a new licensed ICF/DD.
(3) Where additions, modifications, alterations, refurbishing, renovations or reconstruction are undertaken within a facility, all such additions, modifications, alterations, refurbishing, renovations or reconstruction must comply with sections of the applicable codes for new facilities. Florida Administrative Code 59A-26.018

ST - Y1052 - Reporting Fires

Title Reporting Fires
Type Rule

FAC 59A-26.016 (5)

Regulation Definition

(5) All fires or explosions must be reported by the licensee within 24 hours by phone to the Agency for Health Care Administration's field office and the Office of Plans and
Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

Construction. Upon notification the Agency field office shall coordinate with the local fire investigation authority to determine the cause, origin, and circumstances of the fire or explosion. The licensee shall complete the form "Fire Incident Report", AHCA #3500-0031, revised July 2014, incorporated herein by reference and available at http://www.flrules.org/Gateway/reference.asp?No=Ref-06199 or from the Office of Plans and Construction, Agency for Health Care Administration, 2727 Mahan Drive, Mail Stop 24, Tallahassee, Florida 32308 or from the web site at http://ahca.myflorida.com/MCHQ/Plans/pdfs/Fire.pdf. The form must be completed by the licensee and submitted to the Agency's Office of Plans and Construction within 10 calendar days of the incident. Florida Administrative Code 59A-26.016

**Regulation Definition**
Each licensee must have a written plan with procedures to be followed in the event of an internally or externally caused disaster or emergency event. The initiation, development, and maintenance of this plan must be the responsibility of the facility administrator, and must be reviewed and approved by the County Emergency Management Agency. The plan must be reviewed and approved annually. Florida Administrative Code 59A-26.020

**Interpretive Guideline**
Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

ST - Y1056 - Infection Control Risk Assessment

Title Infection Control Risk Assessment
Type Rule

FBC (2017) 6th Ed. 450

**Regulation Definition**

For a health care facility project to support safe designs, finishes, surfaces, and HVAC/plumbing systems, an infection control risk assessment shall be a part of integrated facility planning, design, construction, and commissioning activities. An ICRA shall be conducted during the early planning phase of a project, before construction begins, and continue through project construction and commissioning. At minimum, an ICRA shall be conducted by a team with expertise in infection prevention and control, direct patient care (clinical use of relevant areas), facility design, construction, and HVAC and plumbing systems when these systems are involved. The scope and nature of the project shall dictate others to be involved.

Title Fire Protection, Life Safety, Systems Failure
Type Rule

59A-26.016 (1)-(3), (6) FAC

**Regulation Definition**

(1) Standards for fire prevention for the facility are those adopted pursuant to Rule 69A-3.012, F.A.C., as required by
the Division of State Fire Marshal at Department of Financial Services, and Chapter 69A-38, Uniform Fire Safety Standards for Residential Facilities for Individuals with Developmental Disabilities, F.A.C., as required by the Agency for Persons with Disabilities, as applicable to the classifications of occupancy therein.

(2) The Agency shall conduct an annual fire safety survey. Based upon the survey, a report of deficiencies will be provided to the facility with a time frame for correction.

(3) ICF/DD's providing personal care, as defined in the Life Safety Code NFPA 101 as adopted pursuant to Rule 69A-3.012, F.A.C., as required by the Division of State Fire Marshal at the Department of Financial Services, and Rule Chapter 69A-38, F.A.C., as required by the Agency for Persons with Disabilities, will be reviewed as a Residential Board and Care occupancy under the Florida Specific Edition of NFPA 101 Life Safety Code, as adopted pursuant to Rule 69A-3.012, F.A.C., as required by the Division of State Fire Marshal at the Department of Financial Services, and Rule Chapter 69A-38, F.A.C. as required by the Agency for Persons with Disabilities. ICF/DD's providing services to clients that receive chronic, skilled/acute nursing or medical care or designated as a Level of Care 9 will be reviewed as a Health Care occupancy status under the Florida Specific Edition of NFPA 101 Life Safety Code, as adopted pursuant to Rule 69A-3.012, F.A.C., as required by the Division of State Fire Marshal at Department of Financial Services and Rule Chapter 69A-38, F.A.C., as required by the Agency for Persons with Disabilities. To ensure the life safety code requirements are appropriate for all clients served in an ICF/DD, each licensure survey shall establish or confirm the occupancy status.

Beginning December 1, 2015, upon renewal of each ICF/DD license, the license shall display the occupancy status. The ICF/DD licensee must receive written approval from the Agency, including the Office of Plans and Construction, prior
Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

to a change in the occupancy status. A client requiring chronic, skilled/acute nursing or medical care, or designated as a Level of Care 9 client, may not reside in an ICF/DD with a Residential Board and Care occupancy status.

(6) In the event of a system failure of the fire alarm system, smoke detection system, or sprinkler system, the following actions must be taken immediately by the licensee:

(a) Notify the local fire authority and document any instructions received by the licensee;

(b) Notify the Agency for Health Care Administration Office of Plans and Construction, and the Agency's local field office; and,

(c) Assess the extent of the condition, and implement corrective action with a documented period for compliance. If the corrective action will take more than four hours to complete, the following items must be completed:

1. Implement a contingency plan containing a description of the problem, a specific description of the system failure, and the projected correction period. All staff on shifts involved must have documented in-service training for the emergency contingency.

2. Begin a documented fire watch until the system is restored. Persons used for fire watch must receive training specific to their duty including what to look for, what to do, and how to expeditiously contact the fire department. To maintain a fire watch, the facility must utilize only certified public fire safety personnel, a guard service, or facility staff. If facility staff is utilized for this function, they must meet the following requirements:

a. Be off duty from their regular facility position or assigned only to fire watch duty and be excluded from counting toward the required staffing pattern;

b. Be trained and competent as determined by the licensee in the duties and responsibilities of a fire watch; and,

c. Have immediate access to electronic communication.
Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

3. If the projected correction period changes or when the system is restored to normal operation, the licensee must notify the Agency's Office of Plans and Construction, the Agency's local field office and local fire authorities.

ST - Y1060 - Plant Maintenance & Housekeeping

**Title**  Plant Maintenance & Housekeeping

**Type**  Rule

59A-26.015

**Regulation Definition**

The facility must be maintained in good repair, clean, and a manner consistent with client safety in accordance with Florida Administrative Code 59A-26.015.

**Interpretive Guideline**

ST - Y1061 - External Emergency Communications

**Title**  External Emergency Communications

**Type**  Rule

59A-26.016

**Regulation Definition**

(7) Each new facility must provide for external electronic communication not dependent on terrestrial telephone lines, cellular, radio or microwave towers, such as an on-site radio transmitter, satellite communication systems or a written agreement with an amateur radio operator volunteer group(s). If the latter, this agreement must provide for a volunteer operator and communication equipment to be relocated into the facility in the event of a disaster until communications are restored. Other methods, which can be shown to maintain uninterrupted electronic communications not dependent on
Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

land-based transmission, must be pre-approved by the Agency's Office of Plans and Construction. Florida Administrative Code 59A-26.016

(4) Mechanical system requirements.
(a) Mechanical equipment must be installed in a designated equipment room(s), or in a space(s) located in an attic(s). If the unit serves only one room it may be located above the ceiling and must be accessible through an access opening as required by the Florida Building Code. Access panels are not required for lay-in ceiling installations provided the service functions are not obstructed by other above-ceiling construction such as electrical conduits, piping, audio-visual cabling and like equipment components or supports.
(b) Ventilation must be provided by mechanical means in all rooms in new facilities and in all renovated or remodeled rooms of a facility.
(c) For spaces listed in the Minimum Ventilation Rate Table, central station type air handling equipment must be used. Package terminal air conditioning units or fan coils may be used to serve client rooms and shall be provided with 20 percent filters minimum (Minimum Efficiency Reporting Value 5 or MERV 5).
(d) System designs utilizing fan coil or package terminal air conditioning units must have the outdoor air ventilation damper permanently closed. The ventilation requirement must be satisfied by a central station type air handling unit provided with a 30 percent filter minimum (MERV 5) or as required by the listed space served. Spaces designated for the exclusive use of physical plant personnel need not comply with this requirement.
(e) Administrative and other staff-only areas must be provided with outside air at the minimum rate of 20 cubic feet per minute (9.43 liters/second) per person, and the central system must have a minimum of 30 percent American Society of Heating Refrigerating and Air Conditioning Engineers, Inc. (ASHRAE), dust spot efficiency filter (MERV 5).
(f) All filters in systems in excess of 1000 cubic feet per minute (28.32 cubic meters/minute) capacity must be installed
Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

with differential pressure gauges. The filter gauge must have the range of acceptable filter operation clearly and permanently indicated.

(g) The transfer of air quantities through one space to an adjacent space is not permitted except that the transfer of air to maintain space relative pressure by the undercutting of doors is permitted. The maximum allowable air quantity for door undercuts shall be 75 cubic feet per minute (35.34 liters per second) for single door widths up to 44 inches (111.7 centimeters).

(h) All supply, return and exhaust ventilation fans must operate continuously. Dietary hood, laundry area, administrative areas that are separated from all client areas and support areas, and maintenance area supply and exhaust fans shall be exempted from continuous operation.

(i) Cooling coil condensate must be piped to a roof drain, floor drain or other approved location.

(j) Exhaust fans and other fans operating in conjunction with a negative duct system pressure must be located at the discharge end of the system. Fans located immediately within the building located at the end of all exhaust ducts shall be permitted. Existing nonconforming systems need not be brought into compliance when equipment is replaced due to equipment failure.

(k) All new facility construction must have totally ducted supply, return, exhaust and outside air systems including areas of all occupancy classifications.

(l) During a fire alarm, fan systems and fan equipment serving more than one room must be stopped to prevent the movement of smoke by mechanical means from the zone in alarm to adjacent smoke zones.

(m) Air handling and fan coil units serving exit access corridors for the zone in alarm must shut down upon fire alarm.

(n) Smoke or fire/smoke dampers must close upon fire alarm.
Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

and upon manual shutdown of the associated supply, return or exhaust fan.

(o) Mixing valves used in shower applications must be of the balanced-pressure type design.

(p) Wall mounted water closets, lavatories, drinking fountains and hand-washing facilities must be attached to floor mounted carriers and shall withstand an applied vertical load of a minimum of 250 pounds (113.39 kilograms) to the front of the fixture and provide deep seal traps for floor drains in client showers.

(q) Wall mounted water closets, lavatories, drinking fountains and hand-washing facilities must be attached to floor mounted carriers and shall withstand an applied vertical load of a minimum of 250 pounds (113.39 kilograms) to the front of the fixture and provide deep seal traps for floor drains in client showers.

(r) Ice machines, rinse sinks, dishwashers, and beverage dispenser drip receptacles must be indirectly wasted.

(s) Each water service main, branch main, riser and branch to a group of fixtures must have valves. Stop valves must be provided for each fixture. Panels for valve access must be provided at all valves.

(t) Backflow preventers (vacuum breakers) must be installed on bedpan-rinsing attachments, hose bibs and supply nozzles used for connection of hoses or tubing in housekeeping sinks and similar applications.

(u) A backflow preventer must be installed on the facility main water source(s).

(1) Lighting.

1. All spaces occupied by people, machinery and equipment within buildings, approaches to buildings and parking lots must have electric lighting.

(f) Receptacles.

1. The facility must provide one general purpose receptacle on a wall to serve each client and one additional receptacle at the head of each bed if a motorized bed is provided.

2. Duplex receptacles for general use must be installed in all general purpose corridors, approximately 50 feet (15.24 meters) apart and within 25 feet (7.62 meters) of corridor ends.

3. Each water service main, branch main, riser and branch to a group of fixtures must have valves. Stop valves must be provided for each fixture. Panels for valve access must be provided at all valves.

4. Backflow preventers (vacuum breakers) must be installed on bedpan-rinsing attachments, hose bibs and supply nozzles used for connection of hoses or tubing in housekeeping sinks and similar applications.

5. A backflow preventer must be installed on the facility main water source(s).

**Interpretive Guideline**
Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

2015 EXISTING (Prompt and Slow)

The requirements of 31.2 shall apply only to the parts of means of egress serving the apartment(s) used as a residential board and care occupancy.

Every dwelling unit shall have access to not less than 2 separate exits remotely located from each other as required by 7.5.1.

Dwelling units meeting the conditions of 31.2.4.4 are permitted to have single exit access.

Buildings having not more than four stories may have a single exit provided all the conditions of 31.2.4.5 are met.

Buildings having not more than three stories may have a single exit provided all the conditions of 31.2.4.6* are met.

Any building of any height with not more than four dwelling units per floor, with a smoke proof enclosure in accordance with the requirements of 7.2.3 or outside stairs as the exit, where such exit is immediately accessible to all dwelling units served thereby shall be permitted to have a single exit. The term "immediately accessible" means the travel distance from entrance door of any dwelling unit to an exit shall not exceed 20 feet.

**ST - YA347 - Smoke Detection**

Title  Smoke Detection
Type   Standard

NFPA 101

**Regulation Definition**

Smoke Alarms and Smoke Detection Systems

2015 EXISTING  (Prompt and Slow)

In buildings using Option 2, a complete automatic fire detection system in accordance with 9.6.1.3 shall be required.
Automatic fire detection devices shall be installed as follows:

1. Smoke detectors shall be installed in all common areas and work spaces outside the living unit such as exit stairs, egress corridors, lobbies, storage rooms, equipment rooms, and other tenantless spaces in environments that are suitable for proper smoke detector operation.

2. Heat detectors shall be located within each room of the living unit.

31.3.4.4.1*, 31.3.4.4.2

Buildings other than those equipped throughout with an existing, complete automatic smoke detection system, smoke alarms shall be installed in accordance with 9.6.2.10 outside every sleeping area in immediately vicinity of the bedrooms and on all levels of the dwelling unit including basements.

Smoke alarms as required above shall not be required to be provided with a secondary (standby) power source.

In buildings other than those equipped throughout with an existing, complete automatic smoke detection system or a complete supervised automatic sprinkler system in accordance with 31.3.5, smoke alarms shall be installed in every sleeping area in accordance with 9.6.2.10.

Smoke alarms required above shall be permitted to be battery powered.

31.3.4.5.1* through 31.3.4.5.4
Title: Sprinkler System - Installation

Type: Standard

NFPA 101

Regulation Definition

Sprinkler System Installation

2015 EXISTING (Prompt and Slow)

Where an automatic sprinkler system is installed for total or partial building coverage, the system shall be in accordance with Section 9.7 as modified by 1 and 2 below. In buildings not more than four stories above grade plane, a sprinkler system complying with NFPA 13R shall be permitted.

1. In individual dwelling units, sprinklers shall not be required in closets not exceeding 24 square feet in bathrooms not exceeding 55 square feet. Closets that contain equipment such as washers, dryers, furnaces, or water heaters shall be sprinklered regardless of size.

2. The draft stop and closely spaced sprinkler requirements shall not be required for convenience openings complying with 8.6.9.1 where the convenience opening is within the dwelling unit.

31.3.5.2*, 31.3.5.3, 31.3.5.4

Interpretive Guideline

Buildings using Option 3 shall be provided with automatic sprinkler protection installed in accordance with the following:
1. Automatic sprinklers shall be installed in the corridor, along the corridor ceiling utilizing the maximum spacing requirements of the standards referenced 9.7.

2. An automatic sprinkler shall be installed within every dwelling unit that has a door opening to the corridor - such sprinkler positioned over the center of the door unless the door to the dwelling unit has not less than a 20-min. fire protection rating and is self-closing.

3. Where Option 3 is being used to permit the use of 1-¾ inches thick, solid-bonded wood-core doors in accordance with 31.2.2.1.3, sprinklers shall be provided within the exit enclosure in accordance with NFPA 13.

Buildings using Option 4 shall be protected throughout by an approved automatic sprinkler system in accordance with 31.3.5.2 and meeting the requirements of 9.7 for supervision for buildings seven or more stories in height.

Where sprinklers are being used as an option to any requirement in this Code, the sprinkler shall be installed throughout the space in accordance with the requirements of that option.

ST - YA711 - Evacuation and Relocation Plan

Title  Evacuation and Relocation Plan
Type    Standard

NFPA 101

Regulation Definition

Evacuation and Relocation Plan

The administration of every resident board and care facility shall have in effect and available to all supervisory personnel written copies of a plan for protecting all persons in the event of fire, for keeping persons in place, for evacuating persons to areas of refuge, and for evacuating person from the building when necessary. The plan shall include special staff response, including fire protection procedures needed to ensure the safety of any resident, and shall be amended or revised whenever any resident with unusual needs is admitted to the home. All employees shall be periodically instructed and kept informed with respect to their duties and responsibilities under the plan. Such instruction shall be reviewed by the staff not less than every two months. A copy of the plan shall be readily available at all times within the facility.

Interpretive Guideline

All residents participating in the emergency plan shall be trained in the proper actions to be taken in the event of fire. Training shall include proper actions to be taken if the primary escape route is blocked. If the resident is given rehabilitation or habilitation training, training in fire prevention and the actions to be taken in the event of a fire shall be part of the training program. Residents shall be trained to assist each other in case of fire to the extent that their physical and mental abilities permit them to do so without additional personal risk.

**Regulation Definition**

Corridors - Construction of Walls

2015 EXISTING (Prompt and Slow)

Access shall be provided from every resident use area to not less than one means of egress that is separated from all other rooms or spaces by walls complying with 33.3.3.6.3 through 33.3.3.6.6.3 as modified by the following:

1. Rooms or spaces, other than sleeping rooms, protected throughout by an approved automatic sprinkler system in accordance with 33.3.3.5.

2. Prompt evacuation capability facilities in buildings not over two stories in height, where not less than one required means of egress from each sleeping room provides a path of travel to the outside without traversing any corridor or other spaces exposed to unprotected vertical openings, living areas, and kitchens.

3. Rooms or spaces, other than sleeping rooms, provided with a smoke detection and alarm system connected to activate the building evacuation alarm. Furnishings, finishes, and furniture, in combination with all other combustibles within the spaces, shall be of minimum quantity and arranged so that a fully developed fire is unlikely to occur.

**Interpretive Guideline**
Sleeping rooms shall be separated from corridors, living areas, and kitchens by walls complying with 33.3.3.6.3 through 33.3.3.6.6.3.

Walls required shall have a fire resistance rating of not less than 1/2 hour unless the following conditions apply:

1. In buildings protected throughout by an approved automatic sprinkler system in accordance with 33.3.3.5, walls shall be smoke partitions in accordance with 8.4. The provisions of 8.4.3.5 shall not apply.

2. In buildings not more than two stories in height that are classified as prompt evacuation capability and that house not more than 30 residents, walls shall be smoke partitions in accordance with 8.4. The provisions of 8.2.4.3.5 shall not apply.

#### Regulation Definition

Evacuation and Relocation Plan

The administration of every resident board and care facility shall have in effect and available to all supervisory personnel written copies of a plan for protecting all persons in the event of fire, for keeping persons in place, for evacuating persons to areas of refuge, and for evacuating person from the building when necessary. The plan shall include special staff response,
including fire protection procedures needed to ensure the safety of any resident, and shall be amended or revised whenever any resident with unusual needs is admitted to the home. All employees shall be periodically instructed and kept informed with respect to their duties and responsibilities under the plan. Such instruction shall be reviewed by the staff not less than every two months. A copy of the plan shall be readily available at all times within the facility.

All residents participating in the emergency plan shall be trained in the proper actions to be taken in the event of fire. Training shall include proper actions to be taken if the primary escape route is blocked. If the resident is given rehabilitation or habilitation training, training in fire prevention and the actions to be taken in the event of a fire shall be part of the training program. Residents shall be trained to assist each other in case of fire to the extent that their physical and mental abilities permit them to do so without additional personal risk.

1. The facility must hold evacuation drills at least quarterly for each shift of personnel and under varied conditions to:

   a. Ensure that all personnel on all shifts are trained to perform assigned tasks;
b. Ensure that all personnel on all shifts are familiar with the use of the facility’s emergency and disaster plans and procedures.

2. The facility must:

   a. Actually evacuate clients during at least one drill each year on each shift;

   b. Make special provisions for the evacuation of clients with physical disabilities;

   c. File a report and evaluation on each drill;

   d. Investigate all problems with evacuation drills, including accidents and take corrective action; and

   e. During fire drills, clients may be evacuated to a safe area in facilities certified under the Health Care Occupancies Chapter of the Life Safety Code.

3. Facilities must meet the requirements of paragraphs (i) (1) and (2) of this section for any live-in and relief staff that they utilize.

Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

Interior stairs used as a primary means of escape shall be enclosed with fire barriers in accordance with Section 8.3 having a minimum 1/2-hour fire resistance rating. Stairs shall comply with 7.2.2.5.3. The entire primary means of escape shall be arranged so that it is not necessary for the occupants to pass through a portion of a lower story unless that route is separated from all spaces on that story by construction having not less than a 1/2-hour fire resistance rating. In buildings of construction other than Type II (000), Type III (200), or Type V (000), the supporting construction shall be protected to afford the required fire resistance rating of the supported wall.

1. Stairs that connect a story at street level to only one other story shall be permitted to be open to the story that is not at street level.

2. In Prompt Evacuation Capability facilities, stair enclosures shall not be required in buildings of three or fewer stories protected throughout by an approved automatic sprinkler system in accordance with 33.2.3.5 that uses quick response or residential sprinklers. This exception shall be permitted only if a primary means of escape from each sleeping area still exists that does not pass through a portion of a lower floor, unless that route is separated from all spaces on that floor by construction having a 1/2-hour fire resistance rating.

3. In Prompt Evacuation Capability facilities, stair enclosures shall not be required in buildings of two or fewer stories with not more than eight residents and are protected by an approved automatic sprinkler system in accordance with 33.2.3.5 that uses quick-response or residential sprinklers. The requirement found at section 33.2.2.3.3, 33.2.3.4.6 or 33.2.3.4.3.7 are not permitted to be used in this instance.
4. In Prompt Evacuation Capability facilities, of three or fewer stories protected by an approved automatic sprinkler system in accordance with 33.2.3.5, stairs shall be permitted to be open at the topmost story only. The entire primary means of escape of which the stairs are a part shall be separated from all portions of lower stories.

Stairs shall comply with 7.2.2 unless otherwise specified in Chapter 33. Winders complying with 7.2.2.2.4 shall be permitted. Exterior stairs shall be protected against blockage caused by fire within the building.

#### Regulation Definition

**2015 EXISTING (Prompt)**

Every sleeping room and living area shall have access to a primary means of escape located to provide a safe path of travel to the outside.

Where sleeping rooms or living areas are above or below the level of exit discharge, the primary means of escape shall be an interior stair in accordance with 33.2.2.4, an exterior stair, a horizontal exit, or a fire escape stair.

In addition to the primary route, each sleeping room shall have a second means of escape that consists of one of the following:

1. It shall be a door, stairway, passage, or hall providing a way of unobstructed travel to the outside of the dwelling at street or ground level that is independent of and remotely located from the primary means of escape.

2. It shall be a passage through an adjacent nonlockable space, independent of and remotely located from the primary means of escape, to approved means of escape.

3. It shall be an outside window or door operable from the inside without the use of tools, keys, or special effort that
provides a clear opening of not less than 5.7 square feet. The width shall be not less than 20 inches. The height shall be not less than 24 inches. The bottom of the opening shall be not more than 44 inches above the floor. Such means of escape shall be acceptable where one of the following criteria are met:

   a. The window shall be within 20 feet of finished ground level.

   b. The window shall be directly accessible to fire department rescue apparatus as approved by the authority having jurisdiction.

   c. The window or door shall open onto an exterior balcony.

4. Windows having a sill height below the adjacent finished ground level are that provided with a window well meet the following criteria:

   a. The window well allows the window to be fully openable.

   b. The window is not less than 9 square feet with a length and width of not less than 36 inches.

   c. Window well deeper than 43 inches has an approved, permanently affixed ladder or steps complying with the following:

      1. The ladder or steps do not extend more than 6 inches into the well.

      2. The ladder or steps are not obstructed by the
Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

5. If the sleeping room has a door leading directly to the outside of the building with access to finished ground level or to a stairway that meets the requirements of exterior stairs in 33.2.2.2.2, that means of escape shall be considered as meeting all the escape requirements for the sleeping room.

   a. A second means of escape from each sleeping room shall not be required where the facility is protected throughout by approved automatic sprinkler system in accordance with 33.2.3.5.

   b. Existing approved means of escape shall be permitted to continue to be used.

**Regulation Definition**

Hazardous Areas - Enclosure

2015 EXISTING (Prompt)

Any hazardous area that is on the same floor as, and is in or abut, a primary means of escape or a sleeping room shall be protected by one of the following means:

1. Protection shall be an enclosure with a fire resistance rating of not less than 1 hour, with a self-closing or automatic closing fire door in accordance with 7.2.1.8 that has a fire protection rating of not less than 3/4 hour.

2. Protection shall be automatic sprinkler protection, in accordance with 33.2.3.5, and a smoke partition, in accordance with 8.4 located between the hazardous area and the sleeping area or primary escape route. Any doors in such separation shall be self-closing or automatic closing in accordance with 7.2.1.8.

Other hazardous areas shall be protected in accordance with 33.2.3.2.5 by one of the following:

1. An enclosure having a fire resistance rating of not less than 1/2 hour, with a self-closing or automatic-closing door in accordance with 7.2.1.8 that is equivalent to not less than a 13/4 inch (4.4 cm) thick, solid-bonded wood core.

2015 EXISTING (Prompt)

Approved smoke alarms shall be provided in accordance with 9.6.2.10, unless either of the following exist:

1. Buildings protected throughout by an approved automatic sprinkler system, in accordance with 33.2.3.5, that uses quick response or residential sprinklers, and protected with approved smoke alarms installed in each sleeping room in accordance with 9.6.2.10, that are powered by the building electrical system, or

2. Buildings are protected throughout by an approved automatic sprinkler system, in accordance with 33.3.2.5, that uses quick-response or residential sprinklers, with existing battery-powered smoke alarms in each sleeping room, and where, in the opinion of the authority having jurisdiction, the facility has demonstrated that testing, maintenance, and a battery replacement program ensure the reliability of power to smoke alarms.

Smoke alarms shall be installed on all levels, including basement but excluding crawl spaces and unfinished attics. Additional smoke alarms shall be installed for living rooms, dens, day rooms, and similar spaces. These alarms shall be
powered from the building electrical system and when activated, shall initiate an alarm that is audible in all sleeping areas.

33.2.3.4.3.

ST - YS351 - Sprinkler System - Installation

Title  Sprinkler System - Installation
Type  Standard

NFPA 101

**Regulation Definition**

Sprinkler System - Installation

2015 EXISTING (Prompt)

Where an automatic sprinkler system is installed, for either total or partial building coverage, the system shall be in accordance with Section 9.7 and shall initiate the fire alarm system in accordance with Section 9.6, as modified below. The adequacy of the water supply shall be documented.

In Prompt Evacuation facilities, an automatic sprinkler system in accordance with NFPA 13D, Standard for the Installation of Sprinkler Systems in One and two Family Dwellings and Manufactured Homes, shall be permitted. Automatic sprinklers shall not be required in closets not exceeding 24 square feet and in bathrooms not exceeding 55 square feet, provided that such spaces are finished with lath and plaster or materials providing a 15-minute thermal barrier.

In Prompt Evacuation Capability facilities where an automatic sprinkler system is in accordance with NFPA 13, Standard for the Installation of Sprinkler Systems, automatic sprinklers
shall not be required in closets not exceeding 24 square feet and in bathrooms not exceeding 55 square feet, provided that such spaces are finished with lath and plaster or material providing a 15-minute thermal barrier.

In Prompt Evacuation Capability facilities in buildings four or fewer stories above grade plane, systems in accordance with NFPA 13R, Standard for the Installation of Sprinkler Systems in Residential Occupancies up to and including Four Stories in Height, shall be permitted.

Initiation of the fire alarm system shall not be required for existing installations in accordance with 33.2.3.5.6.

Where an automatic sprinkler is installed, attics used for living purposes, storage, or fuel-fired equipment are sprinkler protected. Attics not used for living purposes, storage, or fuel-fired equipment meet one of the following:

1. Protected by heat detection system to activate the fire alarm system according to 9.6.

2. Protected by automatic sprinkler system according to 9.7.

3. Constructed of noncombustible or limited-combustible construction; or

4. Constructed of fire-retardant-treated wood according to NFPA 703.

**Regulation Definition**

Corridors - Construction of Walls

2015 EXISTING (Prompt)

Unless otherwise indicated below, corridor walls shall meet all of the following:

* Walls separating sleeping rooms have a minimum 1/2-hour fire resistance rating, which is considered to be achieved if the partitioning is finished on both sides with lath and plaster or materials providing a 15-minute thermal barrier.
* Sleeping room doors are substantial doors, such as those of 1-3/4 inch thick, solid-bonded wood-core construction or other construction of equal or greater stability and fire integrity.

* Any vision panels are fixed fire window assemblies in accordance with 8.3.4 or are wired glass not exceeding 9 square feet each in area and installed in approved frames.

This requirement shall not apply to corridor walls that are smoke partitions in accordance with 8.4 and that are protected by automatic sprinklers in accordance with 33.2.3.5 on both sides of the wall and door. In such instances, there shall be no limitation on the type or size of glass panels.

In Prompt Evacuation facilities, all sleeping rooms shall be separated from the escape route by smoke partitions in accordance with 8.2.4.

Sleeping arrangements that are not located in sleeping rooms shall be permitted for nonresident staff members, provided that the audibility of the alarm in the sleeping area is sufficient to awaken staff that might be sleeping.

In previously approved facilities, where the group achieves an E-score of three or less using the board and care methodology of NFPA 101A, Guide on Alternative Approaches to Life Safety, sleeping rooms shall be separated from escape routes by walls and doors that are smoke resistant.

Aspen State Regulation Set: Y 1.02 Life Safety Code for ICF Exist

**Regulation Definition**

HVAC - Any Heating Device

No stove or combustion heater are located to block escape in case of fire caused by the malfunction of a heater or stove.

Unvented fuel-fired heaters shall not be used in any residential board and care facility.

33.2.5.2.2

**ST - YS700 - Operating Features - Other**

**Title** Operating Features - Other

**Type** Standard

NFPA 101

**Regulation Definition**

Operating Features - Other

List in the REMARKS section any LSC Section 32.7 and 33.7 Operating Features requirements that are not addressed by the provided K-tags, but are deficient. This information, along with the applicable Life Safety Code or NFPA standard citation, should be included.

**ST - YS711 - Evacuation and Relocation Plan**

**Title** Evacuation and Relocation Plan

**Type** Standard

NFPA 101
Evacuation and Relocation Plan

The administration of every resident board and care facility shall have in effect and available to all supervisory personnel written copies of a plan for protecting all persons in the event of fire, for keeping persons in place, for evacuating persons to areas of refuge, and for evacuating person from the building when necessary. The plan shall include special staff response, including fire protection procedures needed to ensure the safety of any resident, and shall be amended or revised whenever any resident with unusual needs is admitted to the home. All employees shall be periodically instructed and kept informed with respect to their duties and responsibilities under the plan. Such instruction shall be reviewed by the staff not less than every two months. A copy of the plan shall be readily available at all times within the facility.

All residents participating in the emergency plan shall be trained in the proper actions to be taken in the event of fire. Training shall include proper actions to be taken if the primary escape route is blocked. If the resident is given rehabilitation or habilitation training, training in fire prevention and the actions to be taken in the event of a fire shall be part of the training program. Residents shall be trained to assist each other in case of fire to the extent that their physical and mental abilities permit them to do so without additional personal risk.

33.7.1, 33.7.2
### ST - YS712 - Fire Drills

<th>Interpretive Guideline</th>
</tr>
</thead>
</table>

**Fire Drills**  

1. The facility must hold evacuation drills at least quarterly for each shift of personnel and under varied conditions to:  
   a. Ensure that all personnel on all shifts are trained to perform assigned tasks;  
   b. Ensure that all personnel on all shifts are familiar with the use of the facility's emergency and disaster plans and procedures.  

2. The facility must:  
   a. Actually evacuate clients during at least one drill each year on each shift;  
   b. Make special provisions for the evacuation of clients with physical disabilities;  
   c. File a report and evaluation on each drill;  
   d. Investigate all problems with evacuation drills, including accidents and take corrective action; and  
   e. During fire drills, clients may be evacuated to a safe area in facilities certified under the Health Care Occupancies.

3. Facilities must meet the requirements of paragraphs (i) (1) and (2) of this section for any live-in and relief staff that they utilize.

ST - YS741 - Smoking Regulations

Title  Smoking Regulations
Type  Standard

NFPA 101

Regulation Definition  Interpretive Guideline

Smoking Regulations

Smoking regulations shall be adopted by the administration of board and care occupancies. Where smoking is permitted, noncombustible safety type ashtrays or receptacles shall be provided in convenient locations.

33.7.4.1, 33.7.4.2

ST - YS751 - Draperies, Curtains, and Loosely Hanging Fabr

Title  Draperies, Curtains, and Loosely Hanging Fabr
Type  Standard

NFPA 101

Regulation Definition  Interpretive Guideline

Draperies, Curtains, and Loosely Hanging Fabrics
New draperies, curtains, and other similar loosely hanging furnishings and decorations in board and care facilities shall be in accordance with provisions of 10.3.1.

In other than common areas, new draperies, curtains and other similar loosely hanging furnishings and decorations are not required to comply with 10.3.1 where building is protected throughout by an approved automatic sprinkler system installed in accordance with 33.2.3.5 for small facilities.

33.7.5.1.1, 33.7.5.2

**ST - YS752 - Upholstered Furniture and Mattresses**

**Title** Upholstered Furniture and Mattresses
