

Dental Provider Type Ad Hoc Report Specifications

The managed care plan must submit separate files identifying contracted providers for the provider specialty types listed below.

073 - Pediatric Dentistry
089 - Endodontist
206 - Sedation Permit for Pediatric Conscious Sedation
207 - Sedation Permit for General Anesthesia

All files are pipe “|” delimited, with no header row.

Within each field, use the tilde “~” symbol to separate multiple values.

Field Name	Format (Max)*	Description
Provider ID / Registration #	#(9)	The 9 digit Medicaid ID number provided by FMMIS when a provider is either enrolled or registered with Florida Medicaid.
First Name	@(50)	The first name of the provider.
Last Name / Group Name	@(100)	The last name of an individual provider or the group name of a group.
License Number	@(12)	The license number for this provider.
NPI Number	#(10)	The National Provider Identifier number for the provider.
Address Line 1	@(100)	
Address Line 2	@(100)	
City	@(30)	
State	@(2)	
Zip Code	#(5)	
County Code	#(2)~...	The county this location is physically located in followed by any additional counties the location will provide service for. Please make sure the first county is the county where the location is physically located.
Accepting Patients	B(1)	Is the provider accepting any patients? Y if true, N if false.
Current Patients Only	B(1)	Is the provider accepting only current patients? Y if true, N if false.
Gender Accepted	@(1)	B = Both, M = Male, F = Female (blank = unknown)
Age Restriction Low	@(3)	The youngest patient a provider is willing to see. Leave blank if no restriction. Format: ##A where ## is a number from 0-99 and A is a code for the length of time (D=Days, W=Weeks, M=Months, Y=Years)
Age Restriction High	@(3)	The oldest patient a provider is willing to see. Leave blank if no restriction. Format: ##A where ## is a number from 0-99 and A is a code for the length of time (D=Days, W=Weeks, M=Months, Y=Years)

*Formatting Conventions

Symbol Descriptions

@ = Any Unicode character

= Any numeric character (0-9)

B = Bit field: Y if true, N if false.

“Format (Max)”: The number in parentheses is the maximum length accepted for this field. If no max is specified then there is no restriction on the length of the field. Note: This is a maximum length and data that is less than the maximum should not be padded in any way to make it equal to the maximum length.
